FOR A GREENER EUROPE

2021-1-BE02-KA210-SCH-000031341

Participanți:

**Prof. Simona Crainic
(coordonator)**

Prof. Loredana Leleşan

Elevi: Jessie Crainic

Ștefan Nemet

Darius Rădoni

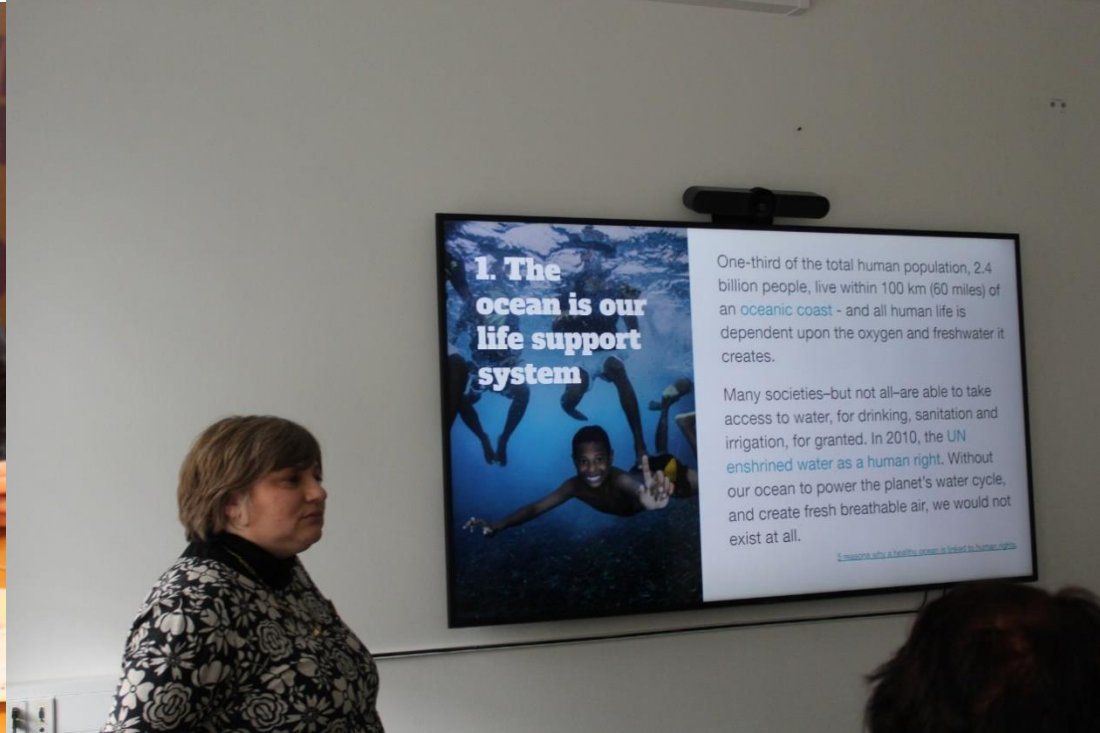

For a Greener
Europe

Prezentare creată de Școala Gimnazială Sarmizegetusa

Legislația UE în domeniul mediului - prezentare -

**Importanța protejării
mediului marin
- ateliere de lucru -**

Zone marine protejate (prezentare)

Pescuitul excesiv – probleme și soluții - ateliere de lucru -

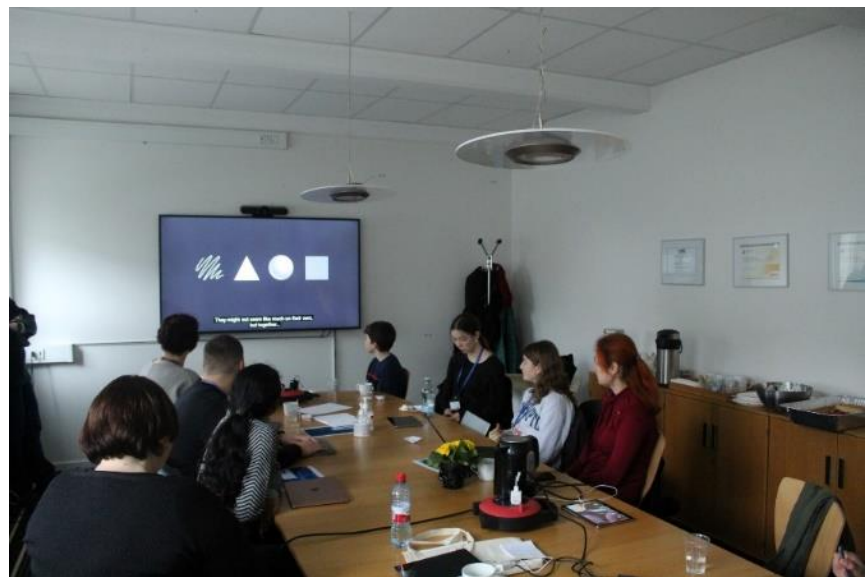

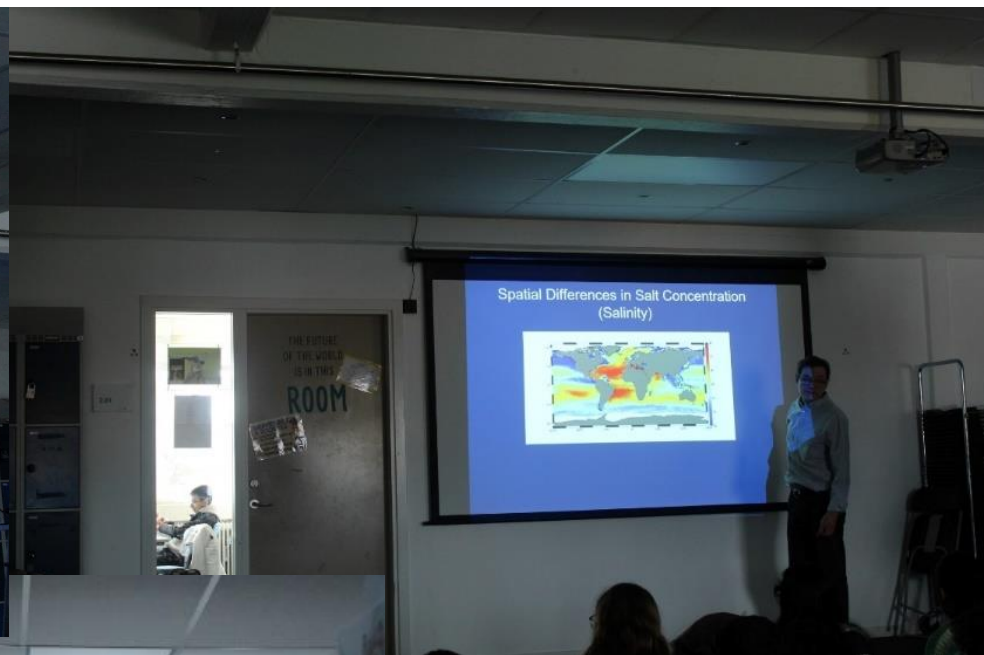

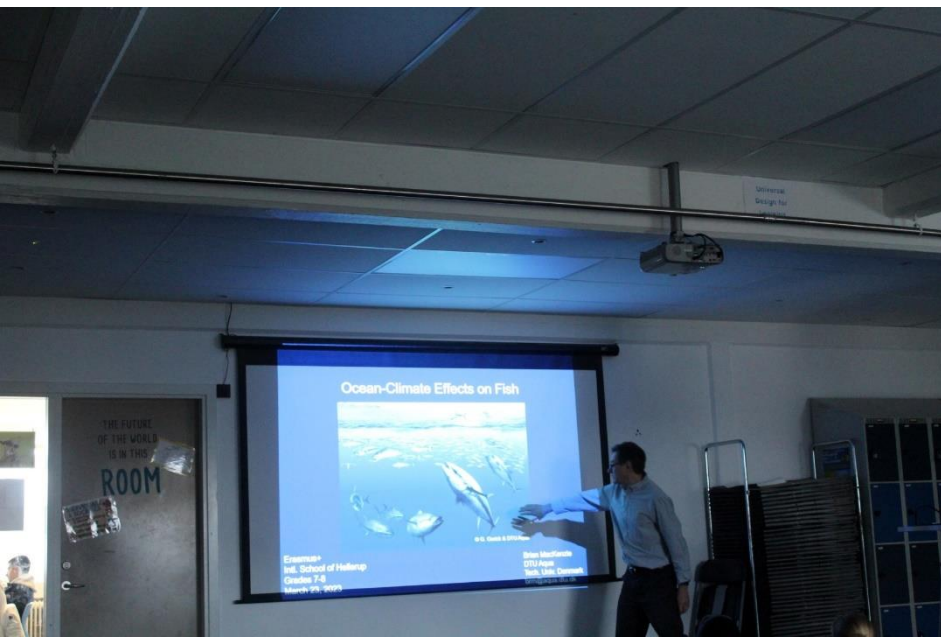

Prezentare:
Ce este CANVA?
Cum o folosim
în realizarea
proiectelor?

Canva

- ateliere de lucru -

Conferință
susținută de
prof. Brian
MacKenzie de
la
Universitatea
Tehnică din
Danemarca
despre mediul
marin.

**Vizită la CopenHill
(centrală combinată de transformare a deșeurilor în energie)**

Ateliere de lucru

BYCATCH, OVERFISHING OR SUSTAINABLE FISHERIES?

OVERFISHING

Overfishing is when more fish are caught than the ecosystem can naturally replace. This is the way towards disaster. ("Overfishing: The Most Serious Threat to Our Oceans")

GREED

People only think of the profit, not the long-term consequences.

BYCATCH

Bycatch is the accidental capture of unwanted species. They are thrown back overboard. Those animals usually die. (WWF)

SUSTAINABLE FISHERIES

Advantages:

- More fish for the future
- Stable economy and society
- Protects biodiversity
- Cleaner, healthier oceans
- Global food security

What is it?

- Fishing only a certain amount (quota)
- Stable work for fisherman
- Protect ecosystems for recovery
- More fish, higher quota ("How Catch Shares Work")

DEFORESTATION

BY CHLOE

WHAT IS DEFORESTATION?

Deforestation is when humans clear out forests and cut down trees. Used for agriculture, building houses etc...

STATISTICS

2,000 years ago 80% western Europe was forested. Now about only 34% is forested. In North America about half of the forests was cut between the 1600s-1870s for timber and space of agriculture. Lastly China has lost much of its forest leaving the country only 20% forested.

WHY IS IT BAD?

Deforestation can result into more carbon dioxide being emitted in the atmosphere. As there are less trees to do photosynthesis it speeds up global warming. Additionally it increases biodiversity loss. Scientists say it can drive many species into extinction.

GLOBAL DEFORESTATION FACTS

- 31% of the world's surface is covered by forests
- 10 million acres of forest are lost between 1990 and 2020
- 2,800 tree are cut down each minute
